Lectures
Design

Dear Oram,

During our regular month board meeting October 17, the Board unanimously agreed to commend you for your enthusiasm and the tireless work that you have done for IBE over the last several years.

We are particularly grateful for the number of new people you have brought to the IBE Electromagnetics seminars as well as the follow up and mentoring of those people at a local and national level.

The monthly local meetings of BB students, BBECs and others in Los Angeles appears to have become a national model following the recent startup of a similar group in the Northeast. We hope that this will occur in other high population areas where there are sufficient people to support it.

The Apprenticeship Program has turned out to be a wonderful success. We are all blown away by the response to the program and by the comments from both those being mentored and the coaches as listed in your report to the board.

We are also grateful for your enthusiastic support of IBE 212 and 312 by your willingness to be a TA at both of these seminars at your own expense and by your participation in the lecture and lab development.

With deep appreciation,

Chris Bell
